- 1.) My cat is:
 Always indoors Indoor/ Outdoor Outdoor always

- 2.) Level of vaccine protection desired:
 Maximum Practical Minimal

- 3.) Where did your cat come from?
 Stray Shelter/ Rescue Private Home Breeder

- 4.) How often do you adopt/foster strays?
 Seldom Frequently Never

- 5.) How often do you board, go to a groomer, or go to cat shows?
 Never Sometimes Frequently

- 6.) How often do you travel out of state with your pet? Where? _____
 Never Sometimes Frequently

Required Core Vaccines:

***FVRCP= Feline Viral Rhinotracheitis, Calicivirus, Panleukopenia**

(F) Feline (V) Viral Respiratory Diseases- (R) Rhinotracheitis and (C) Calicivirus- are highly contagious and widespread. These diseases are easily spread from cat to cat by sneezing, etc. Even a cat that seems healthy can infect your cat. Chances are high that your cat will be exposed.

(P) Panleukopenia- also known as feline distemper, is highly contagious and can be fatal. Nine out of ten cats with distemper may die. Since this disease is easily transmitted from cat to cat, chances are very high that your cat will be exposed. Symptoms include depression, loss of appetite, vomiting, and diarrhea.

***Feline Rabies**

Is a fatal infection of the nervous system that attacks all warm blooded animals including humans. **It is a public health hazard and a risk to all pet owners.** There is no cure for rabies. Vaccination is your pet's only protection.

***Annual Fecal Analysis**

To screen your pet for intestinal parasites, which threaten your pet's health. In large numbers, they can cause intestinal blockages, bloody diarrhea, and even premature

death. Microscopic examinations of your pet's stool should be done yearly for early detection and treatment. Some intestinal worms can be transmitted to humans.

Optional Vaccinations:

***Feline Bordetella (TBR)**

Required if staying in hospital/ boarding/ and grooming. Bordetella is the same respiratory disease (kennel cough) that infects dogs. Kennel cough is a very contagious upper respiratory infection that may last several weeks.

***Feline Leukemia**

Highly recommended if your cat goes outside or comes in contact with outside cats. Feline leukemia is now considered the leading cause of cat deaths. It breaks down the cat's ability to fight off infection of any sort. A cat usually dies of a disease that it would normally be able to resist.
